Wireless communication

Transfer measurement data via Bluetooth, in „live“ mode, to the **Sone! Multimeter Mobile** application. This allows to record and store the results and include additional description or photos. You can also share measurement data as an e-mail attachment.

Cable length
170 cm

Robust design

With the help of the latest technologies, a compact instrument for working in the toughest conditions has been created. The rubber housing protects the device against accidental damage. The back attachment can fit a magnetic hanger strap or a hook strap.

Current logger

The integrated current logger with an RTC can be configured with the logging start date and time and up to **24 hours** of current logging with a refresh rate of 1 second. The captured logs can be analysed later to identify the real-time phenomena as they occurred.

Extended measurements

CMP-3kR can measure frequencies, and its **INRUSH** feature helps testing for inrush current levels of various electrical machines.
