PVM-1530 reSYI

automatic synchronization of STC parameters

# **Professional meter** for photovoltaic installations up to 1500 V

#### **Features**

#### PVM-1530

- It can be used for category 1 measurements according to IEC 62446-1.
- It allows the measurement of the I-U curve for category 2 according to IEC 62446-1.
- It allows the measurement of photovoltaic panels, including bifacial and high-efficiency panels.
- Ability to define measurement procedures.
- It converts measured parameters into STC conditions according to IEC 60891 by cooperation with the IRM-1 solar radiation and temperature meter.
- reSYNC function automatic completion of results with environmental parameters and their conversion to STC conditions after restoring connection with IRM-1.
- The attachable radio interface ensures cooperation with the IRM-1 meter over long distances.
- Built-in Bluetooth and Wi-Fi for communication with external devices.
- Large structured memory of measurements.
- Large touchscreen for good visibility in bright sunlight.

#### IRM-1

- Measurement of solar radiation and temperature.
- The LoRa interface for communication with a master meter offers a larger range than the Bluetooth technology!
- Automatic data synchronization with a master meter with reSYNC function.
- Built-in compass and inclination sensor.
- Built-in recorder that can be used to record solar radiation before constructing PV systems, as well as to measure the shading of existing systems.
- Large measurement memory: 999 cache memory cells and 5000 recorder records available (one-time recording) with the option of overwriting them (continuous recording).

Photovoltaic meter, solar radiation and temperature meter and clamp meter

#### PVM-1530

Photovoltaic meter

#### Sonel MeasureEffect™

The meter is a part of the **Sonel MeasureEffect™** platform. It is a comprehensive system that enables you to take measurements, store and manage data, and provides multi-level control of your instruments.

### **Measured parameters**

#### PVM-1530

- Measurement of I-U and P-U characteristics. Conversion to STC conditions.
- The open circuit voltage of the PV panel or a chain of panels, up to 1500 V DC.
- RMS voltage of the AC network up to 1000 V with frequency measurement.
- Short circuit current of a PV panel or chain of panels up to 40 A DC.
- Insulation resistance of PV panels measuring voltage of 250, 500, 1000, 1500 V DC, simultaneous measurement of two values:  $R_{\rm ISO+}$  and  $R_{\rm ISO-}$ . Insulation resistance of AC circuits - measuring voltage 250, 500, 1000 V DC.
- Resistance of protective conductors and equipotential bonding with ± 200 mA current.
- Measurement of PV panels operating current and AC current all with CMP-1015-PV meter.
- AC/DC power measurement.
- Test of bypass diodes, automatic polarity detection.
- Test of blocking diodes with 1000, 1500 V DC voltage.

#### IRM-1

- Solar radiation intensity (irradiance) in W/m<sup>2</sup> or BTU/ft<sup>2</sup>h.
- PV panel temperature in °C or °F.
- Ambient temperature in °C or °F.
- Inclination angle of panels
- Orientation of the panels with the built-in compass.

page 2 / 6 sonel.com

#### PVM-1530: cat. 1 measurements and I-U characteristics –

The PVM-1530 is a pioneering meter for photovoltaic installations up to 1500 V with such a substantial number of measurement functions. Their selection is done via a touch screen. The screen is large, colorful and with strong backlight so that operation in full sunlight is not a problem. Extensive structural memory significantly reduces the time for preparing post-measurement documentation.

### IRM-1: simple and compact

IRM-1, small, but indispensable for testing PV systems. By measuring solar radiation values, as well as panel and ambient temperatures, it provides the necessary data to convert the results into STC conditions. A built-in recorder with a memory of 5000 records enables the instrument to be used as a tool in the PV plant design process, as well as to diagnose panel shading problems.

### Tightness and durability

The meters perform well in harsh environmental conditions. The PVM-1530's housing is rugged and tight when closed to easily ensure that the meter is protected during measurement.

#### **Communication and software**

Measurement data from the IRM-1 can be transferred to a computer via the USB port. In addition, the device has a built-in wireless **LoRa interface** (Long Range) for automatic data exchange with the master meter — even over long distances.

Measurement data from the PVM-1530 can be transferred to a computer via cable or wireless communication. Saving the downloaded data to popular formats and printing is ensured by **Sonel Reader**. In order to generate a report on electric shock protection use the optional software: **Sonel Reports Plus**.

#### Trouble? reSYNC!

It may happen that in the course of measurements the PVM-1530 moves away from the IRM-1 so far, that communication between them is lost. If the measurements are continued, then after the connection is restored, the results will be automatically **supplemented with environmental parameters**, which in the meantime were recorded by the IRM-1 in its **temporary memory**, and converted into STC conditions.
